Our Story: Sole Ingredients, Shared Purpose

We started this journey guided by a simple idea, that nature favors harmony. Our ingredients are sourced from farms tended in regenerative way, sustaining soil health and integrity over a long period of time. Each day, we are working towards connecting a broad dynamic market with the right ingredients for their business' needs.

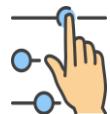

Driven by passion in science and technology, we are also collaborating with labs focused on ingredients innovation to deliver more life-enriching experiences for the people who enjoy the final product. As we grow, we're building a system grounded in what we learn, shaping our approach from farming to processing based on what truly works in real world.

How We Help

Soil-grown ingredients,
currently cocoa and
vanilla

Custom-sourcing support
based on your specific needs

Origin and ingredient
storytelling to support your
brand

Clear documentation
and logistic handling

Flexible order volumes,
including small batches

Private label options for
selected products

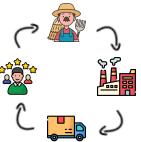

We are still growing, but always open to honest conversations
about your needs, what we can provide, and what we can
explore together.

Our Approach to Responsible Sourcing

Traceable Supply Chain

- Ingredient origins
- Farming and processing practices
- Testing and quality assurances
- People and purpose

Sustainable Farming Practice

- Supports soil health, water resources and biodiversity
- Farming method: agroforestry, integrated farming, low-input farming

Fair & Ethical Partnership

- Fair wages
- Safe-working conditions
- Respect for local communities

Quality & Safety Assurance

- Quality testing
- In-house transparent records across the supply chain

A Glimpse to Farming Practices in Indonesia

Indonesia's agricultural sector is predominantly composed of millions of smallholder farmers (UN Global Pulse). Some are already fully practicing regenerative farming. For instance, intercropping is a common practice in Balinese cacao fields. One of the farmers groups that we work with grow their cacao alongside mango, durian, mangosteen, and banana. Although not certified organic due to cost constraint, they only use manure as fertilizer. In Papua, farmers even believe that chemical fertilizers pose long-term health risks. These scattered gems are widespread across Indonesia and often challenging to find without extensive exploration. For these reasons, we are committed to connecting farmers engaged in regenerative agriculture with a worldwide progressive market.

Products We Offer

- [Single-origin cocoa](#)
- [Kersen Regenerative](#) harvests

Origin Map

To ensure transparency, our website includes an [origin map](#) of our cocoa and Kersen Regenerative harvests.
